

SECURITY BARRIERS

Form & Function

Security Barriers

BY PRECAST SYSTEMS, LLC

At Precast Systems, LLC, we understand the critical importance of protecting your building. We also appreciate your need to present an attractive, aesthetically pleasing image. Why ruin the architectural integrity of your property by placing standard utility barriers around the perimeter? Let Precast Systems' Security Barriers manage pedestrian or vehicle traffic flows without compromising on the beauty of your property.

Produced with high-strength, 5,000 psi concrete and weighing 4,000 lbs., these units offer both form and function. Security Barriers are available with a variety of inserts or painted finishes to complement your structure or environment.

Call (717) 369-3773 today for more information or a quotation for your project.

MEDIAN BARRIERS

USES:

- Traffic Control
- Traffic Restriction
- Protection Barrier
- Block Public Access

SPECIFICATIONS:

SIZE: 12'-0" L x 2'-0" W x 2'-10" H

WEIGHT: 5,000 LBS.

Precast Systems, LLC's precast concrete strong, sturdy, highly durable median barriers are also moveable for greater flexibility and use.

INTERLOCKING ECOLOGY BLOCKS

For an economical alternative to other eco wall systems, consider using environmentally friendly ecology blocks. Produced with high-strength, 5,000 psi concrete, each ecology block is cast with a groove in the bottom and a tongue on the top for a firm, secure fit and to prevent movement when stacked. With an attractive, paintable,

stone-textured finish, these ecology blocks create strong, durable unengineered walls. Their solid mass prohibits cross-contamination when used as raw-material containment systems. Unlike solid poured walls, these rugged blocks can be easily dismantled and reused elsewhere, making them even more environmentally friendly.

Recommended Uses:

- Storage Bins
- Raw Material Containment Systems
- Bank Stabilization
- Traffic Control
- Retaining Walls
